(5) PHARMACOLOGICAL PROPERTIES

(a) PHARMACOLOGICAL CLASSIFICATION

34.12 Category D (Health Supplement) [S0]

(b) PHARMACOLOGICAL ACTION

- Essential nutrients are substances required by the body to perform its basic functions and must be obtained from our diet since the human body cannot produce them. They have one or more of three basic functions: to provide energy, contribute to body structure, and/or regulate chemical processes in the body.
- They're essential for many body functions, including building strong bones and teeth, regulating your metabolism, and staying properly hydrated. These basic functions allow us to detect and respond to environmental surroundings, move, excrete wastes, breathe, grow, and reproduction.
- When essential nutrients are in short supply or is not able to be utilized properly, a specific deficiency syndrome may be the result.
- When the deficient nutrient is resupplied before irreversible damage occurs, the signs and symptoms are reversed. Deficiency of essential nutrients is noticeable in several symptoms that can be easily observed and includes, but are not limited to, for example: weakness, tiredness, decrease in energy which can also lead to the risk of developing illnesses and health problems.
- B vitamins help to metabolise carbohydrates, fats and proteins, contribute to normal psychological function, normal functioning of the nervous system, maintenance of normal mucous membranes, maintenance of normal skin, regulation of hormonal activity, normal function of the heart, and the reduction of tiredness and fatigue.
- Calcium and Vitamin D contribute to the maintenance of normal muscle function and help in the development of healthy bones and teeth.
- Copper, Manganese, Vitamin C, Vitamin E and Zinc are antioxidants which contribute to the protection of cells from oxidative stress and to normal function of the immune system.
- Folic Acid helps to form red blood cells and contributes to maternal tissue growth during pregnancy.
- Iron contributes to normal formation of red blood cells and haemoglobin and their proper function, normal oxygen transport in the body, cognitive function and immune system function.
- Magnesium contributes to normal electrolyte balance, muscle function, psychological function, and the reduction of tiredness and fatigue.
